

Model LV39

Submersible Liquid Level Transducers and Transmitters with Overvoltage Protection

Description

Model LV39 submersible liquid level transducers and transmitters is designed for applications which may have overvoltage or lightning risk. Both the overvoltage protection and short-circuit protection are integrated in this model. Thanks to these protections, the LV39 can be used to measure level of the flammable media by submerged into such media.

The measuring range of LV39 transmitters spans from 0~1 to 0~200 meter water column (mH₂O) with measuring accuracy up to 0.25%fs (fs = full scale). The output signal of transmitters can be configured to either current loop (4~20mA, standard), voltage output (0~5V, 0~10V), or digital output (I²C). The millivolt signal directly from the Wheatstone bridge circuit is also available on request (transducer version).

Features

- Integrated overvoltage protection and short-circuit protection
- measuring ranges: 0~1mH₂O, ..., 0~200mH₂O
- output signal: 4~20mA (standard), 0.5~4.5V, 1~5V, I²C, SPI, transducer output (~80mV @5Vdc) available on request
- accuracy up to 0.25%fs
- materials: 316L SS (pressure membrane), 316 SS (housing)
- construction: all stainless steel housing, rigid and robust
- environment protection: IP68

Notes: 1. For customer ranges, consult BCM.

2. If in your applications the measured medium has different density than water, please inform BCM about the density.

3. 4-core cable for mV and I²C bus; 2-core cable for 4~20mA output; 3-core cable for 0~5V or 0~10V output.

4. For cable length ≤ 0.5m, the output can be I²C bus without other interface;

For cable length = 1m, ..., 15m, an RS-232 interface is applied to realize I²C bus.

For cable length > 15m, an RS-485 interface is applied to realize I²C bus.
